

CMC PROCESS

The CMC Process is a patented sterilization process by Process Integrator (M) Sdn Bhd. This process allows continuous sterilization of the FFB received. Its key benefits includes higher throughput and smaller area footprint compared to conventional sterilizer bay designs.

INDEXER SYSTEM

The indexer system is designed to replace the traditional winch system typically used to move fruit cages around the sterilizer bay. Its gentle push / pull motion prevents any type of damage to the cages. The system is easy to operate and maintenance free.

STERILIZER AUTOMATION

The design depends greatly
